DON'T RISK A RANSOMWARE ATTACK

ALTITUDE

Learn more about safeguarding your patient's data.

Ransomware has recently been one of the commonly talked about topics in the security world regarding risks to organisations and their data. As ransomware attacks increase in the medical industry, many organisations wonder what they can do to protect their valuable information.

Did you know if you have a breach of security, or your client data has been compromised, it is compulsory for you to report it to the Office of the Australian Information Commissioner?
Therefore, your clients will be made aware that you did not protect their data!

SO WHAT IS RANSOMWARE?

Ransomware is a form of malware that encrypts a victim's files. The attacker then demands a ransom from the victim to restore access to the data upon payment. There are several other things the malware might do once it's taken over your computer, however by far the most common action is to encrypt some or all of the your files, and deny you access.

Do you think your organisation could continue to function if this was to happen to you?

IMPACT OF RANSOMWARE

$1000 + per incident

24,000 attacks per day in Australia

Reputational damage

Loss of operational hours

13 Hours +

Legal fees

Loss of patient data

WHAT IS THE COST OF LOSING YOUR DATA?

The loss of critical data to your organisation inflicts significant financial and operational costs. These include the cost of restoring data by utilising an external data loss prevention and restoration company, disruptions caused to day to day activities, and the resulting loss of revenue. Complexities arising from a breach of privacy regarding patient records also pose substantial challenges. Therefore, utilising a cloud based solution to protect your patient's records as a part of regular business processes is pivotal to the optimal operation of your organisation.

HOW CAN YOU PROTECT YOUR VALUABLE PATIENT DATA?

Altitude is a safe, and reliable solution.

Altitude ensures that your organisation's data is maintained and managed in local data centres in Australia, providing you access to your crucial data anywhere, at any time. Altitude is your solution to protect your data, and to avoid the possibility of getting hacked.

ALTITUDE PROVIDES:

Managed Service
We maintain and manage your information to safeguard your data. Upgrades occur seamlessly and performance is optimised for your clinic's needs.

Scalability
Pay a fixed monthly fee, and only pay for what you need. Altitude is configured based on your needs, providing you with a customised solution.

24/7 Access
Your information can be accessed anywhere with an internet connection.

Security & Compliance
Your clinic's data is secured in local data centres in Australia, and strict protocols and encryption methods are utilised to ensure that your most valuable information remains safe.

Local Support
Our support team ensures you receive continuous IT support and monitoring to mitigate the risk of data loss.
